

# Kenttähaun käytössä olevat indeksoidut metadatakentät ja niiden hakualiakset

Kenttähaussa haku voidaan kohdistaa tiettyyn tai tiettyihin dc-kenttiin. Esim. Doriassa haku

```
author:Virtanen and title:järvi
```

etsii dokumentteja, joissa tekijän nimessä esiintyy merkkijono virtanen ja otsikossa merkkijono järvi. Aliashaussa voi käyttää myös fraaseja, esim. abstract:"Lorem ipsum dolor sit amet". Kenttiä on lisättävissä tarvittaessa. Alla olevissa taulukoissa on esitetty eri arkistoissamme parhaillaan käytössä olevat indeksit.

## Lukuohje

*Alias* on haussa käytävä lyhenne Dublin Core -kentästä, *Aliasta vastaava Dublin Core kenttä* -sarakeessa on DC-kenttä, johon alias osoittaa. Jos Dublin Core qualifier on , **esimerkiksi dc.description.\***, alias kohdistuu kaikkiin qualificereihin, kuten dc.description.abstract, dc.description.uri, mutta ei pelkkään dc.descriptioniin. Huomaa, että on myös mahdollista, että yksi alias kohdistuu useaan dc-kenttään, kuten esim. Trepo-julkaisuarkiston series\_journal -alias.

Doria ([www.doria.fi](http://www.doria.fi))

| Alias        | Aliasta vastaava Dublin Core kenttä |
