Asialista

Kehittäjätuokio / Developers' hour

- intermediate build with small fixes: v22.05.682 is on all productions, changelogs: [KK-team release 22.05 \(17th\) changelogs](#), discussion: [slack](#).
- things from the previous meeting in progress (mostly " [Unifications and review](#)"), a few more added: DB structure and configs structure), for now yet, there are no any direct requests to librarians from developers.

KohaCon 2023

- Finland, National Library, and Koha Suomi initiated, and we are applying these days to be the 2023 conference organizer.
 - this is really challenging task and achievement, so we will need help and creativity from all libraries (for example, we want and will organize workshops, have good talks, train people for experience, and many of us can bring a lot of knowledge for attendees, as well discuss and plan Koha future, growth, unite worldwide Koha more, and make friends from abroad).
 - more information on this soon
- "Level2" addition to KohaCon 2023: I will try to convince the Perl community also to have **PerlCon 2023** (that is YAPC::EU which happened before corona every year around the Europe) in stacked with KohaCon, on the same days (overlapped with KohaCon for a day, or we'll see) if we confirm that this will be possible (confirmed from community + finance and load wise possible) - we will really have an unexpectedly big impact on Perl scene and Koha generally, this really can even be the turning point for both communities to unite ("unite again", that's another story).
